1. Purpose

To establish the process for the inspection and verification of incoming raw materials, packaging materials, components and other goods **to ensure they meet specified requirements** and are suitable for use in the production of cosmetic products, in compliance with ISO 22716 guidelines.

2. Scope

This procedure applies to all raw materials, packaging materials, components and other goods received at Our Babylon LLC for use in the manufacturing of cosmetic products.

4. Responsibilities

4.1 Quality Control (QC) Manager: Oversee the incoming inspection process and ensure compliance with ISO 22716 and with this SOP. QC performs the inspections and tests on incoming materials. QC is responsible for sampling incoming raw materials.

4.2 Quality Assurance (QA) Manager is responsible to make sure that the established SOP is followed and it is in compliance with ISO 22716 and cGMP standards. QA reviews and updates the SOP as needed.

4.3 Operation: Coordinate with suppliers to ensure timely receipt of materials and necessary documentation. They collect and organize the expiration and retest date of incoming ingredients.

4.4 Production Manager and Supervisor is responsible for assisting the QC Manager and conducting incoming inspections and trailer inspection as needed.

4.5 All personnel performing tasks controlled by this procedure are responsible for understanding and following this standard operating procedure.

5. Definitions

5.1 Incoming Inspection: The process of inspecting and verifying materials upon receipt to ensure they meet specified requirements.

5.2 Non-conformity: A deviation from specified requirements or standards.

5.3 Certificate of Analysis (CoA): A document provided by the supplier that certifies the quality and specifications of the materials.

5.4 Safety Data Sheet (SDS): A document that provides information on the health and safety of using a substance or product.

6. Procedure

6.1 Receipt of Ingredients

6.1.1 Upon arrival, verify the cleanliness and condition of the trailer (if applicable) according to the Trailer Inspection Checklist document.

6.1.2 Verify that the shipment is intact and free from visible damage.

6.1.3 Bring the received material to the receiving area.

6.1.4 Carefully inspect the received materials. Cross-check the received materials against the packing slip and purchase order (PO). Check the delivered ingredients, for accuracy in quantity and description.

6.1.4.1 Attach a “Quarantine” sticker to each individual unit received.
6.1.4.2 Notify the QC Manager that new ingredients were received.

6.1.5 Look for any damage to the packages. Look for possible leaks and contamination on the original packages.

6.1.5.1 If the received ingredients are damaged, if a container is leaking or there is any indication that the quality of the ingredients are compromised, inform QC, QA and the Production Manager.

6.1.5.2 The QC Manager conducts an inspection and presents the results of the inspection to the Production and Quality Assurance Manager to decide if the damaged ingredients need to be rejected. If the ingredients are rejected, QC will apply the “Reject” sticker on the packaging.

6.1.5.3 If the ingredient is rejected start the Supplier Corrective Action Report (SCAR) procedure per SOP 6.2.3, Supplier Corrective Action Request. Move ingredients from the receiving area to the quarantine area.

Uncontrolled when Printed

6.1.6 Production or the QC Manager will input the receive date and vendor lot # into the Babylon Production List excel file, under the “Receive Ingredients” tab. This step informs Operations that the ingredient was received.

6.1.7 Operations will input the manufacturing date, expiration date and retest date of raw material to the Babylon Production List excel file, under the “Receive Ingredients” tab.

6.2 Documentation Review

6.2.1 Verify the presence and accuracy of all necessary documentation:

Certificates of Analysis (CoA)
Safety Data Sheets (SDS)
Packing slip

6.2.2 Make sure that the CoA matches the batch/lot numbers and specifications as per the purchase order.

6.2.3 Operations is collecting the CoA and SDS documents in the designated folders in Google Drive: _COA & SDS

6.2.3.1 If CoA or SDS documents are not attached to the incoming ingredients, reach out to the Operations or look for the documents in the designated folders: _COA & SDS .

6.2.3.2 The CoA files are named and organized by PO number, product name, supplier and supplier lot number. See example below:

PO91929 - Kelp Powder (Macrocystis Pyrifera) - NutriCargo - COA - 24-02-046.pdf

6.3 Quality Control Inspection of received ingredients

6.3.1 Find the Incoming ING Inspection Form for the received ingredient in Google Drive and assign a new Inspection Number: PO number_Babylon ING code_01 (or 02 if multiple lots of the same ING code). Print out ING Inspection Form.

6.3.2 Inspect and evaluate the received ingredients using the Incoming ING Inspection Form.

6.3.2.1 Note, that the prerequisite of the inspection is to have the lot specific CoA of the inspected ingredients.

6.3.2.2 Inspect the packaging of the ingredients. Make sure that there are no tears or holes in primary packaging, no leaking, no contaminants, proper labeling

6.3.2.3 Inspect the ingredients for “Color, texture, aroma” and describe them in the ING Inspection Form

6.3.2.4 Check the labels and lot numbers on the received ingredients to ensure they match the purchase order and CoA.

6.3.2.5 Review the CoA and make sure that the test results provided by the supplier or manufacturer meet acceptance criteria set by the supplier or by Babylon.

6.3.2.6 If a test result meets acceptance criteria, mark the “Pass” check box.

6.3.2.7 If a test result does not meet acceptance criteria, mark the “Fail” check box. If any acceptance criteria are not met, the ingredient does not pass incoming QC inspection, the QC Manager will consult with the Production and QA Manager to decide if the ingredient must be rejected.

Uncontrolled when Printed

6.3.2.7.1 If the ingredient is rejected, apply the “Reject” sticker and start SCAR procedure according to step 6.1.5.3 .

6.3.2.8 If the ingredient passes the QC inspection, apply a green QC Accepted sticker, and initial/date the sticker.

6.3.2.9 Assign the next sequential Babylon lot number to the ingredient and print out a Babylon bar code using the ING_lots spreadsheet. Attach the printed barcode to both the Incoming ING Inspection Form and to each individual unit of the received ingredient.

6.3.2.10 Attach the lot specific COA and packing list to the Incoming ING Inspection Form of the ingredient.

6.4 Sampling

6.4.1 QC personnel take samples of the ingredients per SOP 9.7.1, Sampling Procedure.

6.4.1.1 If multiple units of the same vendor lot are received, only one unit needs to be sampled. Clearly indicate which unit was sampled.

6.4.2 Ensure that sampling is performed in a clean environment to prevent contamination.

6.4.3 Label and document the samples appropriately with:

6.4.3.1 Supplier name

6.4.3.2 Batch/lot number

6.4.3.3 Date of receipt

6.4.3.4 Expiry date (if applicable)

6.5 Testing and Verification

6.5.1 Perform necessary tests on the samples if needed, to verify compliance with specified requirements (e.g., physical properties, chemical composition, microbiological tests) if needed.

6.5.2 Compare test results with the specifications outlined in the CoA and internal quality standards.

6.6 Disposition

6.6.1 If the materials meet all specified requirements, apply the QC acceptance sticker and release them from quarantine for use in production and update the inventory records.

6.6.2 If the materials do not meet the requirements, apply QC Rejected Sticker.

Proprietary Information of Our Babylon LLC – Not to be Disclosed or Reproduced without Prior Written Approval

Uncontrolled when Printed

6.6.4 If the ingredient is rejected, start the Supplier Corrective Action Report (SCAR) procedure per SOP 6.2.3, Supplier Corrective Action Request. Move ingredients from the receiving area to the quarantine area.

6.7 Documentation and Records

6.7.1 Record all inspection results, including test data, CoA, and any non-conformities.

6.7.1.1 QA Manager will review the records before they are uploaded to Google Drive.

6.7.1.2 Scan completed ING Inspection Form (including test data, COA, packing list) into the designated Google Drive folder. Name the file as "Babylon Lot #, PO #, Babylon ING code, Babylon ING name”.

6.7.2 Maintain records per SOP 17.1, Document Control and Data Control Procedure.

6.7.3 Retain inspection records for a minimum of 5 years.

6.8 Follow-Up Actions for non-conforming materials

6.8.1 For non-conforming materials, work with the supplier to address the issues and arrange for replacement or corrective actions.

6.8.2 Document any corrective actions taken and follow-up on corresponding SCAR to ensure the effectiveness of these actions.

6.9 Monitoring and Review

6.9.1 The QA Manager conducts periodic reviews of the incoming inspection process to ensure its effectiveness and compliance with ISO 22716.

6.9.2 Regular supplier performance reviews are conducted to assess the quality of incoming materials.

Uncontrolled when Printed

7. Internal Audits

7.1 The QA Manager conducts periodic reviews of SOP Incoming Inspection compliance to ensure effectiveness and identify areas for improvement. QA regularly reviews the SOP to determine if changes and updates are needed.

7.2 Regular internal audits are performed to verify adherence to these SOP and ISO 22716 guidelines.

8. Revision History

Revision	Date	Description
Revision 02	02/16/2026	The Section 6.3 “Quality Control Inspection of received ingredients” was updated to reflect the changes made in the Form 6.3.3.
Revision 01	01/27/2026	The incoming inspection process was updated with a new process. See section 6.3 Quality Control Inspection of received ingredients. Responsibilities were specified. Instructions for Form 6.3.3, Incoming ING Inspection was added.
New	6/3/2024	New standard operating procedure which defines the requirements of SOP Incoming Inspection.
